DETAILED ACTION

Allowable Subject Matter

The following is an examiner's statement of reasons for allowance: Regarding claims 1 and 11, the prior art of record, Aarnio teaches a mobile telephone having a camera configured to generate an image of a document containing the contact data (location information is one form of contact data [sections 0006 and 0016] or even retail information is another form of contact data [section 0023]) in a first format that contains the data (digital image data, Sections 0006 and 0016 and 3.4 of Fig. 3); a processing server configured to receive the image via a wireless communication network, process the image to recognize the contact data with an image processing system, extract the contact data from the image and arrange the data according to a second format (mobile telephone sends image to mobile network 14 which extracts data and sends back to mobile telephone in a TXT, display image, audible message, etc. [Sections 0006-0008 and 0016-0018]; and a specific contact database in the mobile telephone, associated with the processing server, that receives and stores the extracted contact data according to the second format, wherein the second format is different from the first format and is consistent with the specific contact database so that the extracted contact data can easily be added to the specific contact database (the contact is stored in the phone in order to for the user to view/hear the information, Sections 0006-0008 0016-0018, and 0023).

Henderson teaches that the extracted contact data can easily be added to the specific contact database and a user can easily make a call on the mobile telephone

using the added extracted contact data (contact data [i.e. addresses, numbers, etc] is transmitted to the device and stored for easy access for the user, abstract).

Herzig teaches a mobile telephone 100 (Figs. 1 and 2) having a camera 110 or 120 (Figs. 1 and 2) configured to generate an image of a printed document (paper with print by hand, typewriter, or printed) containing the contact data (Col. 2 lines 21-40); a processing server 141 (Fig. 2) configured to receive the image via a wireless communication network, process the image to recognize the contact data with an image processing system, extract the contact data from the image (Col. 3 lines 19-42); and a specific contact database in the mobile telephone, wherein a user can easily make a call on the mobile telephone using the added extracted contact data (Col. 2 lines 21-40).

Even though the combination of Aarnio, Henderson, and Herzig teaches all limitations in claims 1 and 11, the examiner does not believe that one of ordinary skill in the art would be motivated to combine these three references. Further applicant's arguments on page 8 line 13-page 9 line 9 of the appeal brief filed on 10/29/2010 state reasons for allowance too.

The prior art of record fails to teach the claimed subject matter as claimed and substantially connected in claims 1-5, 7-10, and 21; and 11-15, 17-20, and 22.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
